2. Project Overview

2.1 Purpose

Harvest – Nutrition Assistant is a full-stack web application developed to promote healthy eating habits by providing personalized nutrition guidance and meal management. The primary goal of the application is to help users maintain a balanced diet through customized meal plans, calorie tracking, nutrient analysis, and health progress monitoring. The system enables users to manage their nutritional information efficiently while offering intelligent recommendations based on their health goals and dietary preferences.

The application is built using the **MERN Stack (MongoDB, Express.js, React.js, and Node.js)** to provide a secure, scalable, and responsive platform. It incorporates user authentication, interactive dashboards, and real-time data management to deliver an enhanced user experience. The project also supports administrators in managing user accounts, monitoring system activities, and maintaining application data securely.

Goals of the Project

- Develop a user-friendly web application for nutrition management.
 - Enable secure user registration and authentication.
 - Provide personalized meal planning based on user preferences.
 - Track daily calorie intake and nutritional values.
 - Monitor user health progress through reports and dashboards.
 - Offer healthy food recommendations and nutritional insights.
 - Ensure secure data storage and efficient application performance.
 - Build a scalable and maintainable full-stack application using the MERN Stack.
-

2.2 Features

The **Harvest – Nutrition Assistant** application provides several features that assist users in managing their daily nutrition and maintaining a healthy lifestyle.

User Management

- User Registration and Login
- Secure Authentication using JWT
- Password Encryption using bcrypt
- Password Reset and Logout

Profile Management

- Create and Update User Profile
- Store Personal and Health Information

- Set Health Goals and Dietary Preferences

Meal Planning

- Personalized Meal Plan Generation
- Daily Meal Scheduling
- Healthy Recipe Suggestions
- Food Recommendation System

Nutrition Tracking

- Daily Food Intake Logging
- Calorie Tracking
- Macronutrient Monitoring (Protein, Carbohydrates, and Fats)
- Water Intake Tracking

Health Monitoring

- BMI Calculation
- Weight Tracking
- Progress Monitoring
- Nutrition Reports and Analytics

Dashboard

- Interactive Dashboard
- Daily Nutrition Summary
- Weekly and Monthly Progress Reports
- Charts and Graphical Analysis

Administrator Module

- User Management
- Dashboard Analytics
- System Monitoring
- Report Management

Security Features

- JWT-Based Authentication
- Role-Based Access Control
- Password Hashing using bcrypt
- Secure REST APIs

- Input Validation

Technical Features

- Responsive User Interface
- RESTful API Integration
- MongoDB Database Management
- React Component-Based Architecture
- Cloud-Ready Deployment
- Cross-Browser Compatibility

The **Harvest – Nutrition Assistant** provides a complete digital nutrition management solution by combining personalized meal planning, nutrition tracking, health monitoring, and secure user management into a single responsive web application. It helps users make informed dietary decisions while offering administrators efficient tools to manage and monitor the overall system.

Ideation Phase

Brainstorm & Idea Prioritization Template

Date	31 January 2025
Team ID	
Project Name	Harvest – Nutrition Assistant
Maximum Marks	4 Marks

Brainstorm & Idea Prioritization Template:

Brainstorming provides a free and open environment that encourages everyone within a team to participate in the creative thinking process that leads to problem solving. Prioritizing volume over value, out-of-the-box ideas are welcome and built upon, and all participants are encouraged to collaborate, helping each other develop a rich amount of creative solutions.

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

Reference: <https://www.mural.co/templates/brainstorm-and-idea-prioritization>

Step-1: Team Gathering, Collaboration and Select the Problem Statement

Harvest – Nutrition Assistant

Brainstorm & idea prioritization

Use this template in your own brainstorming sessions so your team can unleash their imagination and start shaping concepts even if you're not sitting in the same room.

🕒 10 minutes to prepare

👥 1 hour to collaborate

👥 2-8 people recommended

Before you collaborate

A little bit of preparation goes a long way with this session. Here's what you need to do to get going.

🕒 10 minutes

Team gathering

Bring the right people together for the session and share relevant information or pre-work about our project – **Harvest – Nutrition Assistant**.

Set the goal

Think about the problem we'll be focusing on solving in the brainstorming session.

Learn how to use the facilitation tools

Use the facilitation superpowers to run a happy and productive session.

[Open article](#)

1

Define your problem statement

What problem are you trying to solve? Frame your problem as a How Might We statement. This will be the focus of your brainstorm.

🕒 5 minutes

PROBLEM

How might we help users manage their nutrition effectively with personalized guidance and easy tracking?

Key rules of brainstorming

To run an effective and productive session

Stay in topic.

Encourage wild ideas.

Defer judgment.

Listen to others.

Go for volume.

If possible, be visual.

Step-2: Brainstorm, Idea Listing and Grouping

2

Brainstorm

Write down any ideas that come to mind that address your problem statement.

⌚ 10 minutes

TIP

You can select a sticky note and hit the pencil icon to write down your ideas!

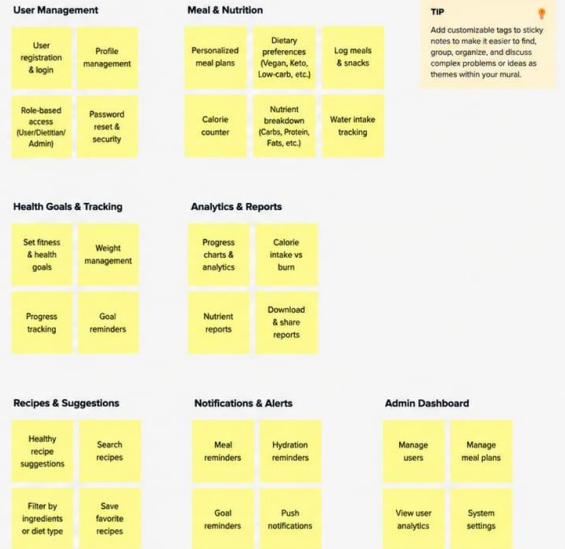

3

Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. In the last 10 minutes, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you can break it up into smaller sub-groups.

⌚ 20 minutes

**TIP**

Add customizable tags to sticky notes to make it easier to find, group, organize, and discuss complex problems or ideas as themes within your mural.

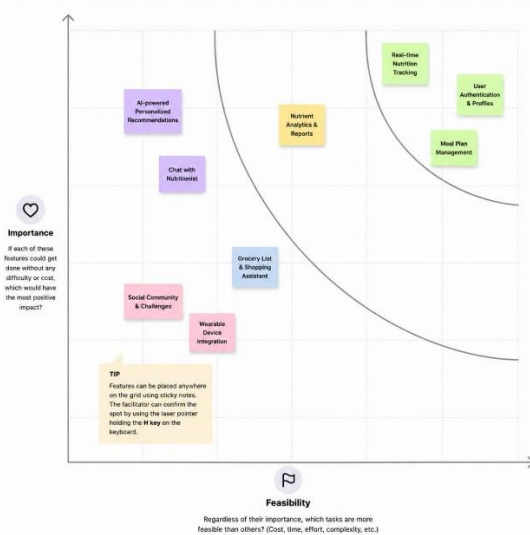

Step-3: Idea Prioritization

4

Prioritize

Our team should be on the same page about what's important moving forward. Place your ideas on this grid to determine which features are important and which are feasible.

⌚ 20 minutes

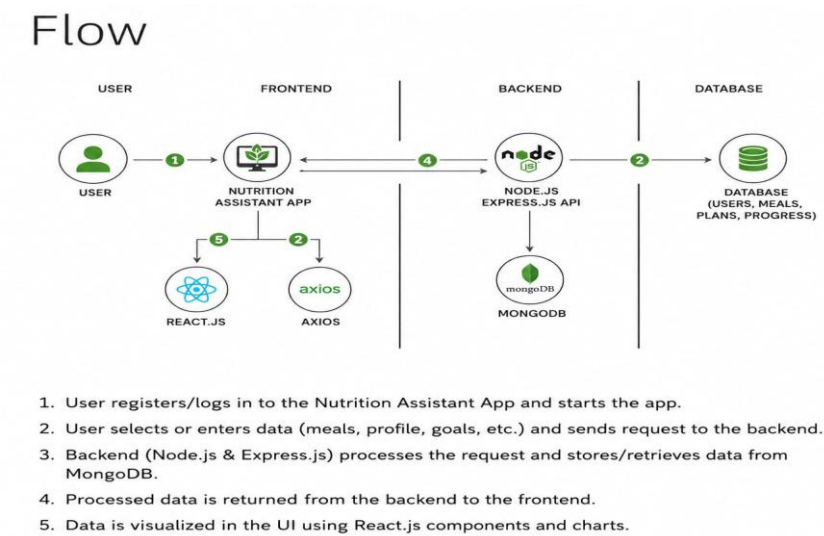

**Project Design Phase-II****Data Flow Diagram & User Stories**

Date	31 January 2025
Team ID	
Project Name	Harvest – Nutrition Assistant
Maximum Marks	4 Marks

Data Flow Diagrams:

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: [\(Simplified\)](#)

User Stories

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Web User)	Registration	USN-1	As a user, I can register for the application by entering my name, email, and password.	User account is created successfully and the user can log in.	High	Sprint-1
	Registration	USN-2	As a user, I can log in using my registered email and password.	User is redirected to the dashboard after successful login.	Medium	Sprint-1
	Registration	USN-3	As a user, I can securely log out of the application.	User session ends and returns to the login page.	High	Sprint-1
	Login	USN-4	As a user, I want my session to be secured using JWT authentication.	Authenticated users can access protected pages only.	High	Sprint-2
	Dashboard	USN-5	As a user, I can view my dashboard logging in.	Dashboard displays user information and available features.	High	Sprint-2
	Meal Plan	USN-6	As a user, I can record and view my nutrition progress.	Client details are saved successfully.	High	Sprint -3
	Progress Tracking	USN-7	As a dietitian, I can add a new client.	Updated client details are displayed correctly.	Medium	Sprint-2
Dietitian	Client Management	USN-8	As a dietitian, I can edit client information.	Selected client is removed from the database	High	Sprint-2
	Client Management	USN-9	As a dietitian, I can delete client records.	Meal plans are created and assigned successfully.	High	Sprint-2
	Client Management	USN-10	As a dietitian, I can create personalized meal plans for clients.	Meal plans are created and assigned successfully.	High	Sprint-3

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
	Meal Plan Management	USN-11	As a dietitian, I can update meal plans.	Updated meal plans are saved and displayed correctly.	High	Sprint-3
	Meal Plan Management	USN-12	As a dietitian, I can monitor client nutrition progress.	Client progress reports are displayed accurately.	High	Sprint-3
	Progress Monitoring	USN-13	As a dietitian, I can monitor client nutrition progress.	Client progress reports are displayed accurately.	High	Sprint-4
Administrator		USN-14	As an administrator, I can manage a users and data.	User and application data can be managed securely.	Medium	Sprint-4

Ideation Phase

Define the Problem Statements

Date	31 January 2025
Team ID	
Project Name	Harvest – Nutrition Assistant
Maximum Marks	2 Marks

Customer Problem Statement Template:

Create a problem statement to understand your customer's point of view. The Customer Problem Statement template helps you focus on what matters to create experiences people will love.

A well-articulated customer problem statement allows you and your team to find the ideal solution for the challenges your customers face. Throughout the process, you'll also be able to empathize with your customers, which helps you better understand how they perceive your product or service.

I am 	Describe customer with 3-4 key characteristics - who are they?	I am a health-conscious individual (student/professional/fitness enthusiast) who wants to maintain a healthy lifestyle. I care about my diet, fitness and overall well-being. I may or may not have prior nutrition knowledge, but I want guidance that is personalized and easy to follow.
I'm trying to 	List their outcome or "job" the care about - what are they trying to achieve?	I'm trying to eat healthy, get personalized meal plans, track my daily nutrition intake, achieve my health goals (like weight loss, weight gain or maintenance) and improve my eating habits with the support of a dietitian.
but 	Describe what problems or barriers stand in the way - what bothers them most?	But I face challenges such as lack of personalized diet plans , difficulty in tracking daily nutrition, not knowing the right portion sizes, busy schedule, inconsistent eating habits and limited access to professional dietitian guidance.
because 	Enter the "root cause" of why the problem or barrier exists - what needs to be solved?	Because existing solutions are either generic, not easy to use, or not connected with dietitians . There is no simple platform that provides personalized meal planning, nutrition tracking, progress monitoring and dietitian support in one place.
which makes me feel 	Describe the emotions from the customer's point of view - how does it impact them emotionally?	Which makes me feel frustrated, confused and unmotivated . I feel guilty when I can't follow a diet plan, worried about my health goals and overwhelmed when I don't see progress. It affects my confidence and consistency in maintaining a healthy lifestyle.

Reference: <https://miro.com/templates/customer-problem-statement/>

Example:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A health-conscious individual who wants to maintain a healthy lifestyle.	Follow a balanced diet, track my nutrition, and receive personalized meal recommendations.	I find it difficult to calculate nutritional values and create suitable meal plans on my own.	Reliable nutrition information is scattered across different sources, and most applications do not provide	Confused, frustrated, and unable to consistently maintain healthy eating habits.

				personalized guidance.	
PS-2	A dietitian who manages multiple clients with different nutritional requirements.	Create personalized meal plans and monitor each client's nutrition progress efficiently.	Managing client records, meal plans, and progress manually takes a lot of time and effort.	There is no centralized platform that securely stores client information and nutrition data.	Overloaded, less productive, and unable to provide timely personalized support to all clients.

Ideation Phase

Empathize & Discover

Date	31 January 2025
Team ID	
Project Name	Harvest – Nutrition Assistant
Maximum Marks	4 Marks

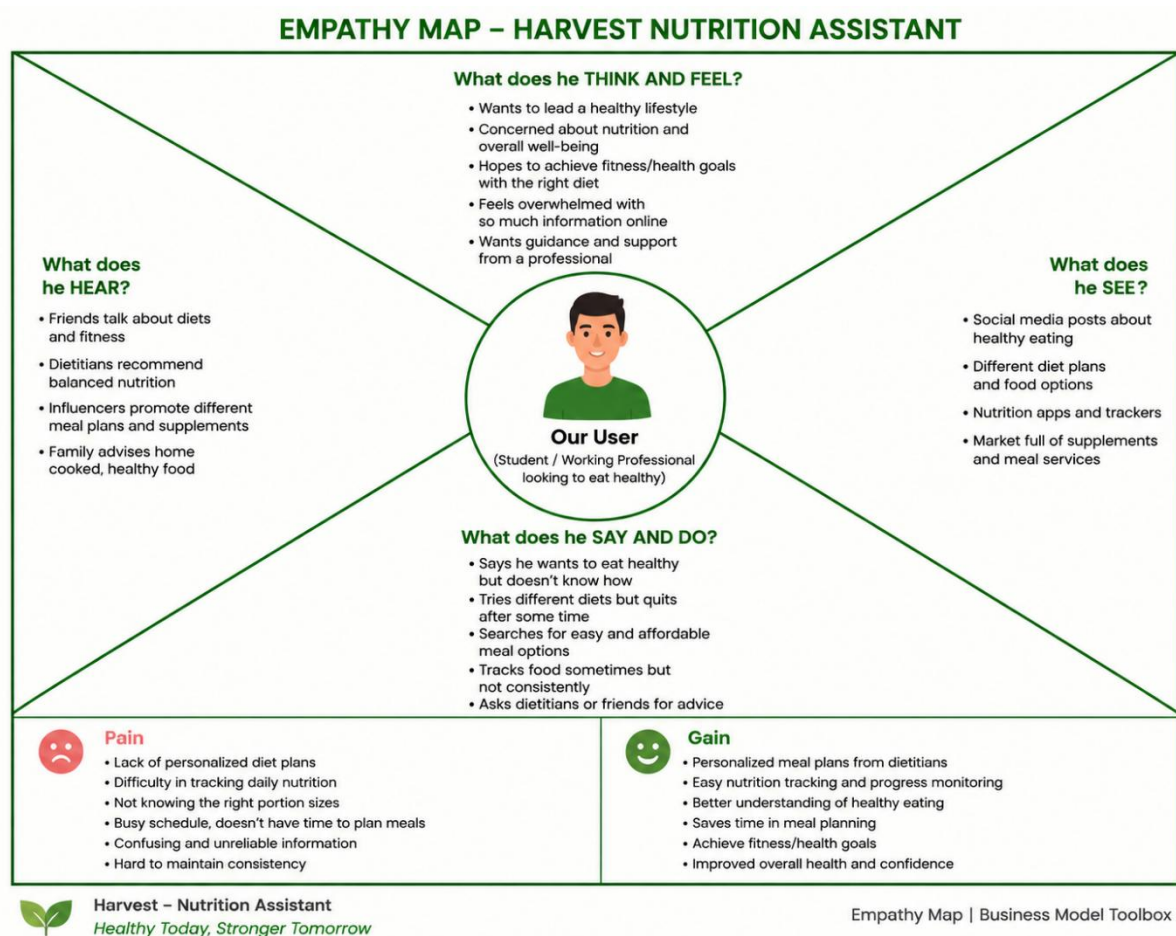

Empathy Map Canvas:

An empathy map is a simple, easy-to-digest visual that captures knowledge about a user's behaviours and attitudes.

It is a useful tool to help teams better understand their users.

Creating an effective solution requires understanding the true problem and the person who is experiencing it. The exercise of creating the map helps participants consider things from the user's perspective along with his or her goals and challenges.

Example:

Reference: <https://www.mural.co/templates/empathy-map-canvas>

Example: Food Ordering & Delivery Application

Project Design Phase

Problem – Solution Fit Template

Date	15 February 2025
Team ID	
Project Name	Harvest – Nutrition Assistant
Maximum Marks	2 Marks

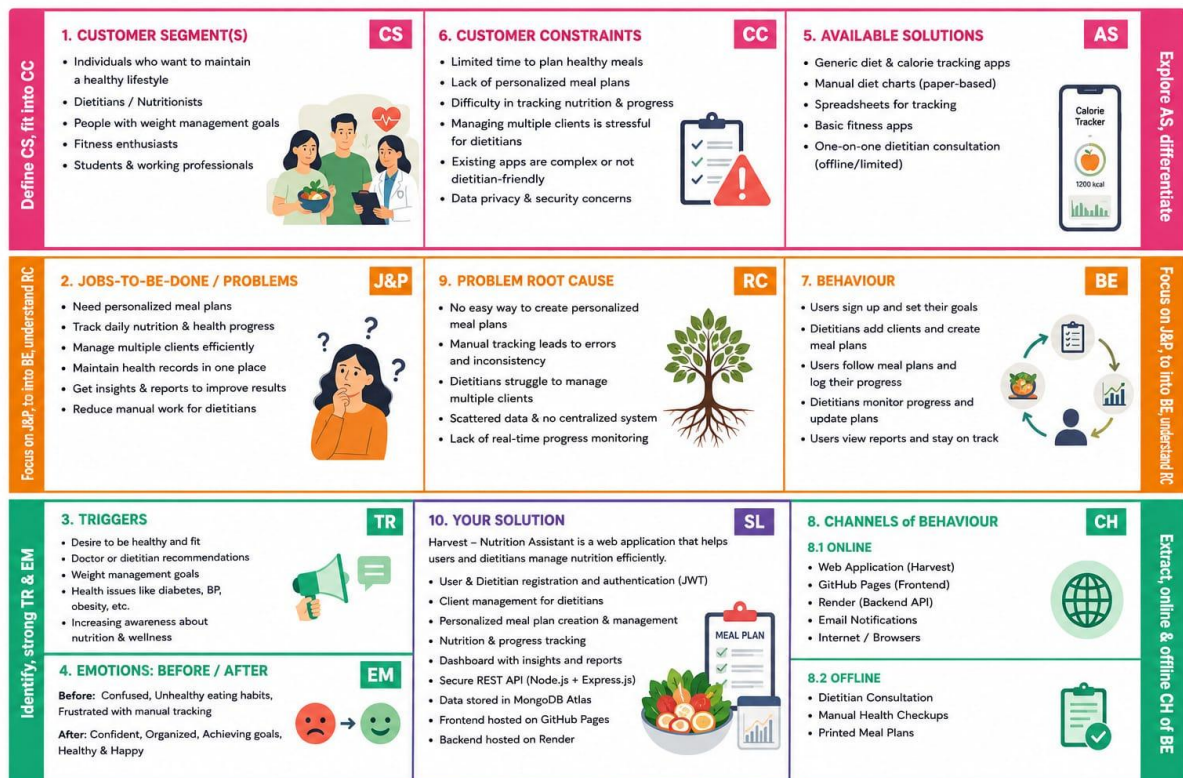

Problem – Solution Fit Template:

The Problem-Solution Fit simply means that you have found a problem with your customer and that the solution you have realized for it actually solves the customer's problem. It helps entrepreneurs, marketers and corporate innovators identify behavioral patterns and recognize what would work and why

Purpose:

- ☐ Solve complex problems in a way that fits the state of your customers.
- ☐ Succeed faster and increase your solution adoption by tapping into existing mediums and channels of behavior.
- ☐ Sharpen your communication and marketing strategy with the right triggers and messaging.
- ☐ Increase touch-points with your company by finding the right problem-behavior fit and building trust by solving frequent annoyances, or urgent or costly problems.
- ☐ **Understand the existing situation in order to improve it for your target group.**

Template:

2. <https://medium.com/@epicantus/problem-solution-fit-canvas-aa3dd59cb4fe>

Project Planning Phase

Project Planning Template (Product Backlog, Sprint Planning, Stories, Story points)

Date	15 February 2025
Team ID	
Project Name	Harvest – Nutrition Assistant
Maximum Marks	5 Marks

Product Backlog, Sprint Schedule, and Estimation (4 Marks)

Use the below template to create product backlog and sprint schedule

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I want to register by entering my name, email, and password so that I can create an account.	5	High	Pravallika
Sprint-1	Registration	USN-2	As a user, I want to log in securely using my email and password.			Pravallika
Sprint-1	Registration	USN-3	As a user, I want to register using my Gmail account for quick access.	5	High	Pravallika
Sprint-2	Client Management	USN-4	As a dietitian, I want to add a new client so that I can manage their nutrition details.	2	Low	Pravallika
Sprint-3	Meal Plan	USN-5	As a dietitian, I want to update meal plans based on client progress.	3	Medium	Pravallika
Sprint-1	Login	USN-6	As a user, I want my session to be securely maintained using JWT authentication.	2	High	Pravallika
Sprint-3	Dashboard	USN-7	As a user, I want to view my dashboard with nutrition information and meal plans.	4	high	Pravallika

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	20	6 Days	24 Oct 2022	29 Oct 2022	20	29 Oct 2022
Sprint-2	20	6 Days	31 Oct 2022	05 Nov 2022	20	28 Feb 2025
Sprint-3	20	6 Days	07 Nov 2022	12 Nov 2022	20	03 March 2025
Sprint-4	20	6 Days	14 Nov 2022	19 Nov 2022	20	28 March 2025

Velocity:

Imagine we have a 10-day sprint duration, and the velocity of the team is 20 (points per sprint). Let's calculate the team's average velocity (AV) per iteration unit (story points per day)

$$AV = \frac{\text{sprint duration}}{\text{velocity}} = \frac{20}{10} = 2$$

Burndown Chart:

A burn down chart is a graphical representation of work left to do versus time. It is often used in agile software development methodologies such as Scrum. However, burn down charts can be applied to any project containing measurable progress over time.

Project Design Phase

Proposed Solution Template

Date	15 February 2025
Team ID	
Project Name	
Maximum Marks	2 Marks

Proposed Solution Template:

Project team shall fill the following information in the proposed solution template.

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	Many individuals struggle to maintain a healthy diet due to the lack of personalized nutrition guidance, difficulty in tracking daily food intake, and limited access to organized meal planning. Dietitians also face challenges in manually managing client information and creating customized nutrition plans.
2.	Idea / Solution description	Harvest – Nutrition Assistant is a full-stack web application that provides users with personalized nutrition management. Users can securely register and log in, receive customized meal plans, track nutrition progress, and monitor their health goals. Dietitians can manage client profiles, create personalized meal plans, and monitor client progress through a centralized dashboard. The application is developed using HTML, CSS, JavaScript, Node.js, Express.js, MongoDB Atlas, JWT Authentication, GitHub Pages, and Render.
3.	Novelty / Uniqueness	The application integrates user authentication, nutrition tracking, meal planning, client management, and cloud-based data storage into a single platform. Unlike general diet-tracking applications, Harvest supports both users and dietitians, providing personalized meal recommendations and centralized

		nutrition management with secure cloud deployment.
4.	Social Impact / Customer Satisfaction	The system encourages healthy eating habits and improves nutrition awareness by offering personalized meal plans and nutrition tracking. It reduces manual effort for dietitians, enhances communication between users and healthcare professionals, and improves overall customer satisfaction through an easy-to-use and secure platform.
5.	Business Model (Revenue Model)	The application can adopt a Freemium Subscription Model . Basic services such as registration, nutrition tracking, and meal management are offered free of charge, while premium subscriptions provide advanced personalized diet plans, online dietitian consultations, nutrition analytics, downloadable health reports, and institutional packages for hospitals, clinics, and fitness centers.
6.	Scalability of the Solution	The solution is built using scalable technologies including Node.js, Express.js, MongoDB Atlas, Render, and GitHub Pages. It can support a growing user base and can be expanded with AI-powered nutrition recommendations, barcode food scanning, wearable fitness device integration, mobile applications, multilingual support, appointment scheduling, and advanced health analytics in the future.

Project Design Phase

Solution Architecture

Date	15 February 2025
Team ID	
Project Name	Harvest – Nutrition Assistant
Maximum Marks	4 Marks

Solution Architecture:

Solution architecture is a complex process – with many sub-processes – that bridges the gap between business problems and technology solutions. Its goals are to:

- Find the best tech solution to solve existing business problems.
- Describe the structure, characteristics, behavior, and other aspects of the software to project stakeholders.
- Define features, development phases, and solution requirements.
- Provide specifications according to which the solution is defined, managed, and delivered.

Example - Solution Architecture Diagram:

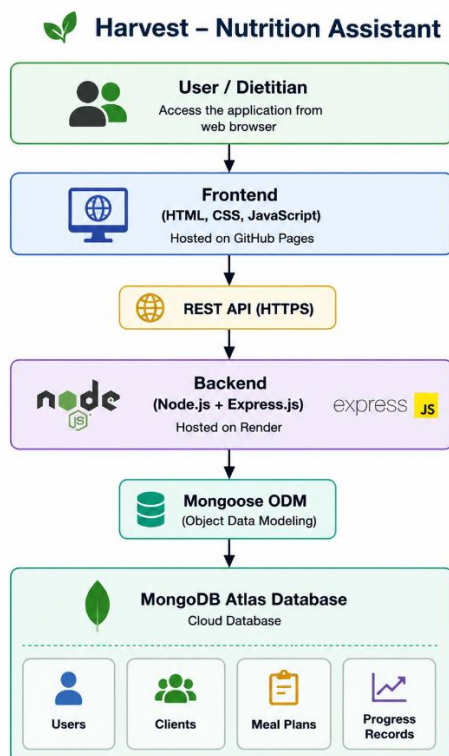

Figure 1: Architecture and data flow of the voice patient diary sample application

Reference: <https://aws.amazon.com/blogs/industries/voice-applications-in-clinical-research-powered-by-ai-on-aws-part-1-architecture-and-design-considerations/>

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	31 January 2025
Team ID	
Project Name	Harvest – Nutrition Assistant
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration through Form Registration through Gmail Registration through LinkedIn
FR-2	User Confirmation	Confirmation via Email Confirmation via OTP
FR-3	Client Management	Add New Client View Client Details Edit Client Information Delete Client
FR-4	Meal Plan Management	Create Meal Plan Assign Meal Plan to Client Update Meal Plan Delete Meal Plan
FR-5	Nutrition Progress Tracking	Record Nutrition Progress View Progress History Update Progress Records

FR-6	Dashboard	Display User Dashboard View Client List Display Meal Plans Display Nutrition Statistics
------	-----------	--

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Simple, responsive and user-friendly interface for dietitians and individual users.
NFR-2	Security	Passwords encrypted using bcrypt, JWT authentication, secure REST APIs.
NFR-3	Reliability	Reliable database operations using MongoDB Atlas with proper error handling.
NFR-4	Performance	Fast API response, optimized backend, efficient database queries.
NFR-5	Availability	Frontend available through GitHub Pages and backend hosted on Render with high uptime.
NFR-6	Scalability	Supports adding more users, clients, meal plans, and nutrition records without major changes.

Project Design Phase-II

Technology Stack (Architecture & Stack)

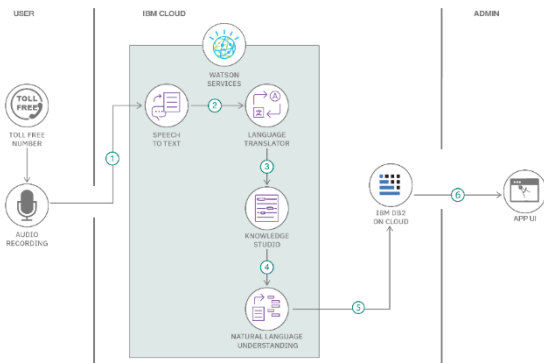

Date	31 January 3035
Team ID	
Project Name	Harvest – Nutrition Assistant
Maximum Marks	4 Marks

Technical Architecture:

The Deliverable shall include the architectural diagram as below and the information as per the table1 & table 2

Example: Order processing during pandemics for offline mode

Reference: <https://developer.ibm.com/patterns/ai-powered-backend-system-for-order-processing-during-pandemics/>

Guidelines:

- Include all the processes (As an application logic / Technology Block)
- Provide infrastructural demarcation (Local / Cloud)
- Indicate external interfaces (third party API's etc.)
- Indicate Data Storage components / services
- Indicate interface to machine learning models (if applicable)

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	Responsive web application for users and administrators	HTML5, CSS3, JavaScript, React.js, Bootstrap
2.	Application Logic-1	User Authentication, Registration and Login	Node.js, Express.js

3.	Application Logic-2	Meal Planning and Nutrition Tracking	Node.js, Express.js
4.	Application Logic-3	Dashboard Analytics and Report Generation	React.js, Chart.js
5.	Database	Stores users, meal plans, nutrition records and progress data	MongoDB, Mongoose
6.	Cloud Database	Cloud-hosted database for secure storage	MongoDB Atlas
7.	File Storage	Stores profile images and uploaded files	Local File System / Cloudinary (Optional)
8.	External API-1	Nutrition and food information API	USDA FoodData Central API / Edamam Nutrition API
9.	External API-2	Email verification and notifications	EmailJS / Nodemailer
10.	Machine Learning Model	AI-powered nutrition recommendations (Optional Enhancement)	TensorFlow.js / OpenAI API
11.	Infrastructure (Server / Cloud)	Application deployment and hosting	Local Server, Render, Vercel, Netlify

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Frontend and backend frameworks used in the application	React.js, Node.js, Express.js, Bootstrap, Mongoose
2.	Security Implementations	Secure login, password encryption, authentication and authorization	JWT Authentication, bcrypt Password Encryption, HTTPS, Input Validation, CORS
3.	Scalable Architecture	Three-tier architecture supporting modular and scalable development	MERN Stack, RESTful APIs, MongoDB
4.	Availability	Ensures continuous availability through cloud hosting and database services	MongoDB Atlas, Render, Vercel
5.	Performance	Optimized application performance using efficient database queries, API optimization and frontend optimization	MongoDB Indexing, Axios, React Lazy Loading, Code Splitting, Express Middleware optimization

User Acceptance Testing (UAT) Template

Date	15 July 2026
Team ID	
Project Name	Harvest – Nutrition Assistant
Maximum Marks	5

Project Overview:

Project Name: Harvest – Nutrition Assistant

Project Description: Harvest – Nutrition Assistant is a web-based nutrition management system that helps users securely register, log in, manage nutrition information, receive personalized meal plans, and track their health progress. It also enables dietitians to manage clients, create meal plans, and monitor client progress through a centralized platform.

Project Version: Version 1.0

Testing Period 10 July 2026 to 15 July 2026

Testing Scope:

Features to be Tested

- User Registration
- User Login
- JWT Authentication
- Client Management
- Meal Plan Management
- Nutrition Progress Tracking
- Dashboard
- MongoDB Database Connectivity
- REST API Communication

User Stories to be Tested

- User Registration
- User Login
- Add Client
- Edit Client

- Delete Client
- Create Meal Plan
- Update Meal Plan
- View Meal Plan
- Track Nutrition Progress

Testing Environment: Frontend URL:

<https://pravallikaalapati4-hub.github.io/nutrition-assistant/>

Backend URL:

<https://nutrition-assistant-2-nlqb.onrender.com>

Database: MongoDB Atlas

Browser: Google Chrome

Operating System: Windows 11

Credentials (Example):

- Username: testuser@example.com
- Password: Test@123

Test Cases:

Test Case ID	Test Scenario	Test Steps	Expected Result	Actual Result	Pass/Fail
TC-001	User Registration	Enter valid name, email, and password → Click Register	User account created successfully	Account created successfully	Pass
TC-002	User Login	Enter valid email and password → Click Login	User logged in successfully	Login successful	Pass
TC-003	Add Client	Login as dietitian → Add client details → Save	Client added successfully	Client added	Pass
TC-004	Edit Client	Select client → Update details → Save	Client information updated	Updated successfully	Pass
TC-005	Delete Client	Select client → Delete	Client removed	Deleted successfully	Pass
TC-006	Create Meal Plan	Select client → Create meal plan → Save	Meal plan stored successfully	Meal plan created	Pass
TC-007	Update Meal Plan	Modify meal plan → Save	Updated meal plan displayed	Updated successfully	Pass
TC-008	Track Progress	Enter nutrition progress → Save	Progress recorded	Saved successfully	Pass
TC-009	Dashboard	Login → Open Dashboard	Dashboard displays user information	Dashboard displayed correctly	Pass
TC-010	API Connectivity	Access frontend and perform operations	Frontend communicates with backend successfully	API working correctly	Pass

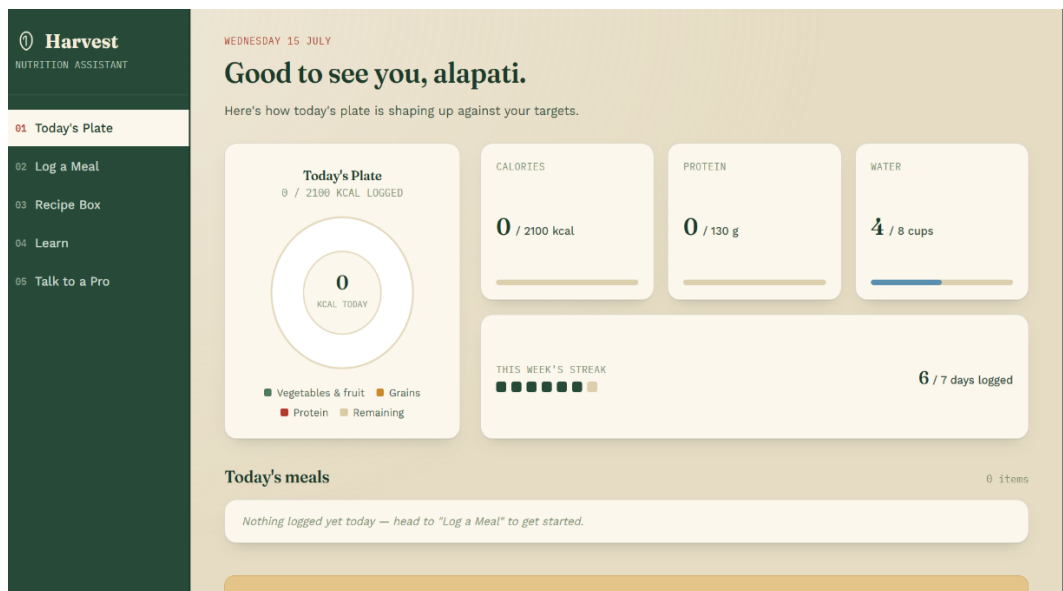

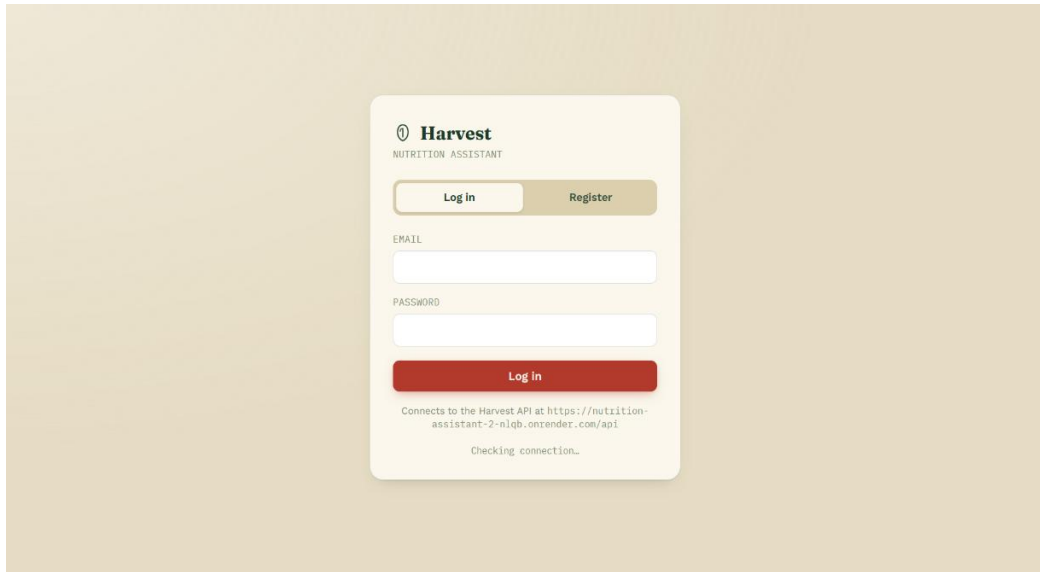

Bug Tracking:

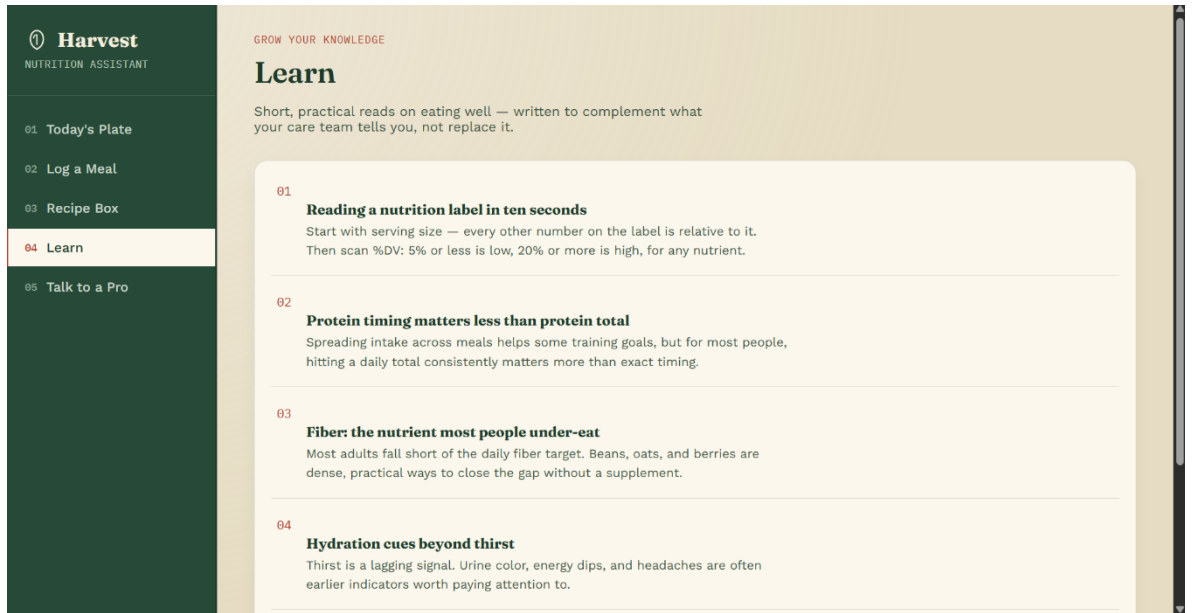

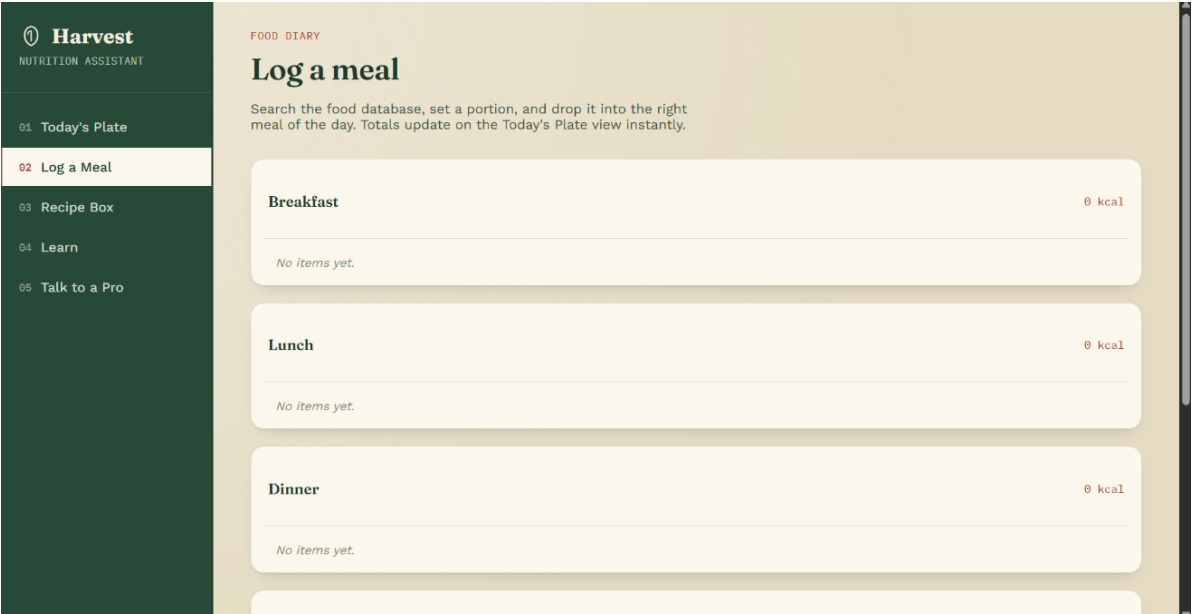

Bug ID	Bug Description	Steps to reproduce	Severity	Status	Additional feedback
BG-001	Incorrect login error for invalid password	Enter wrong password and click Login	Medium	Closed	Validation message improved
BG-002	Client form validation issue	Leave required fields empty	Low	Closed	Required field validation added
BG-003	API URL configuration issue during deployment	Open frontend before updating API URL	High	Closed	Backend API URL updated and redeployed

Sign-off:**Tester Name:** Pravallika Alapati**Date:** 15 July 2026**Signature:** Pravallika .Alapati_____**Notes:**

- Ensure that all test cases cover both positive and negative scenarios.
- Encourage testers to provide detailed feedback, including any suggestions for improvement.
- Bug tracking should include details such as severity, status, and steps to reproduce.
- Obtain sign-off from both the project manager and product owner before proceeding with deployment.

Harvest supports your choices — it doesn't replace a doctor or registered dietitian.

REAL PEOPLE. REAL GUIDANCE

Talk to a nutrition professional

Registered dietitians available for a one-off question or ongoing check-ins. Harvest connects you — they provide the clinical judgment.

⚠

Messaging a professional here is a supplement to, not a substitute for, an in-person evaluation — especially if you're managing a diagnosed condition or taking medication that affects diet.
